**Robinson Value Management Introduces  
The WEALTH OF NATIONS<sup>®</sup> Strategy and Composite**

San Antonio. January 2, 2012 - Robinson Value Management announces the introduction of the WEALTH OF NATIONS<sup>®</sup> investment strategy and its corresponding composite.

"Today's capital markets face the dual challenges of a slow growth environment and an economy increasingly managed by the government," said Charles W. Robinson, III CFA, Chief Investment Officer of Robinson Value. "We believe that investors need a solution that provides them with both the capital appreciation of domestic stock ownership along with tools for actively managing exposure to systemic risk."

Robinson Value Management's investment strategies were developed with the goal of taking advantage of the post-crash, high debt economic environment. To this end, Robinson Value employs traditional, fundamental security analysis in combination with analysis of financial and capital market responses to government policy-making and execution. This approach takes into account both company-specific risks as well as systemic risk, specifically systemic risk influenced by government activities, when building and managing investment portfolios.

The WEALTH OF NATIONS<sup>®</sup> strategy maintains a 70/30 blend of our low volatility Contrarian Value Equity strategy and our award-winning Market Opportunity strategy.
